1.1 Construction of 2D shapes

Let us make a square by folding a paper by following the given steps.

Step 1:
Take a paper

Step 2:
Fold the paper as shown in the figure.

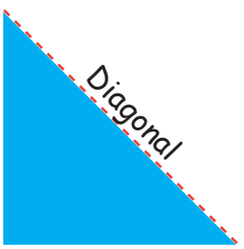

Step 3:
Shade the extra portion in the bottom with red colour. Tear it off and keep it aside.

Step 4: Open up the triangle. What do you observe?
You could see a square.
The crease in the middle of the square is called the 'Diagonal of the square'.
You can note that the diagonal divides the square into two triangles.

Try This

Can you find the other diagonal of the square by folding it the other way? If so, how many diagonals can you find for a square?.

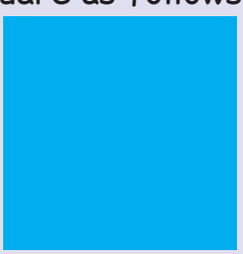

Observe the number of sides and corners of a square.
A square has **four** sides, **four** corners and **two** diagonals.

properties of a square

we shall summarise the properties of a square as follows

- Square has four sides.
- All the four sides are equal.
- Square has four corners.
- Square has two diagonals.
- The two diagonals are equal.

Teacher's note: Teacher can guide the children to do this paper folding activity.
