Let us express this in a number line

Repeated subtraction statement 30 - 5 - 5 -5 - 5 -5 -5 = 0

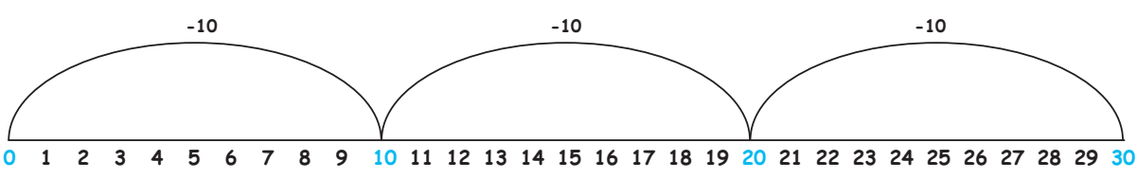

Kabilan distributed **30 mangoes** among **5 of his friends** by giving them one mango in each step.Thus each friend has got **6 mangoes**.

Imagine Kabilan has to share these 30 mangoes among 10 of his friends.

Number of steps	Number of mangoes with Kabilan	Friends										Number of mangoes remaining
		F1	F2	F3	F4	F5	F6	F7	F8	F9	F10	
Step 1	30											20
Step 2	20											10
Step 3	10											0
Total number of mangoes each had at the end	0	3	3	3	3	3	3	3	3	3	3	0

Number of steps = 3

The number line for the above situation:

Repeated subtraction statement 30 -10 -10 - 10 = 0

This time Kabilan has shared **30 mangoes** among **10 of his friends** in **3 steps**. Each friends has got **3 mangoes**.
