Equal sharing is mathematically called as **"division"** and division is denoted by the symbol "÷".

The Division fact is $30 \div 5 = 6$

Let us see another example

$$8 \div 4 = 2$$

Here, 8 is the **dividend** 4 is the **divisor** and 2 is the **quotient**

Complete the table.

Total number of Balloons to be shared.	Number of baskets	Equal sharing	Number of balloons in each basket	Division fact
8	4		2	8 ÷ 4 = 2
8	2			
10	5			
15	3			
30	6			

Can you share 2 mangoes among 5 of your friends?
No, This means that dividend should always be greater than the divisor.
