3. Finding the pairs of 10

When a set of numbers are given to add, We shall find the pairs of numbers gives the sum 10 and add them.

Example

Find the sum of 7+4+6+3

7+4+6+3

7+3=10 and 6+4=10

Hence the sum of the numbers =10+10=20

Example

Find the sum of 5+3+2+6+4

5+3+2+6+4

6+4=10 5+3+2=10

Hence the sum = 10+10=20

Exercise

Find the sum of i) 5+1+5+9 ii) 2+5+5+7+1 iii) 3+6+1+2+8

4) Doubling

i. We shall double a number when we add the same number twice.

Example

5 + 5 = 2 X 5 = 10

7 + 7 = 2 X 7 = 14

ii. We shall also use doubling when we add nearer numbers.

Example

5 + 6 = 2 X 5 +1 = 10 + 1 = 11

4 + 5 = 2 X 5 -1 = 10 - 1 = 9

5. Adding two digit numbers

Add the ones and skip count the 10 s

Example

Find the sum of 7+ 12.

7 and 2 gives 9.

From 9 skip count in tens to get the sum 19.

7 + 2 = 9 9 + 10 = 19
