Freezing

Change of liquid into solid on cooling is known as **freezing**. For example, water (liquid) poured in ice-tray and placed in the freezer (fridge), gets cooled and becomes ice (solid).

Condensation

Changes of gas into liquid on cooling is called **condensation**. For example; clouds (gas) on cooling condense and fall as rain (liquid)

Let us think

What makes the coconut oil freeze in winter season?

Complete the table

State of matter	Add	New state	Process
ice	+ heat		melting
water	+ heat	steam	
clouds	+ cool	liquid	
	+ cool		freezing

Think and answer

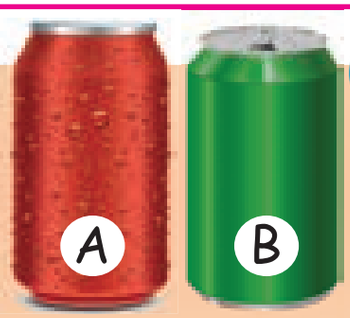

One of these cans was in the fridge and the other was not.

a) Which can was taken from the fridge?

b) How do you know?

c) How did water droplets appear on the can A?

d) Why are there no water droplets on can B?
