Gravitational force

- When you throw a ball up in the air, why does it come down?
- When we jump, why do we come down? Why don't we fly?

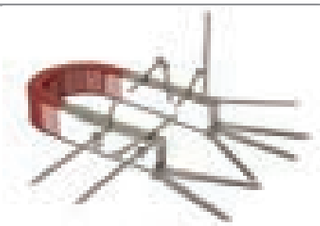

Why this happens?

The Earth pulls all the objects towards itself. The force applied by the Earth to pull objects towards itself is called **gravitational force.**

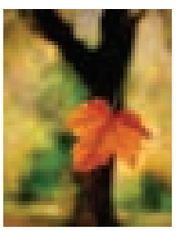

Magnetic force

A magnet is a material that attracts things made of iron. The force that attracts things is called **magnetic force.**

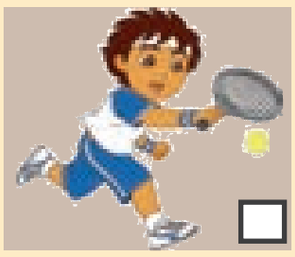

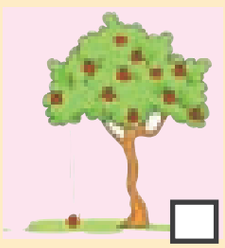

Observe the picture and write the kind of force involved here.

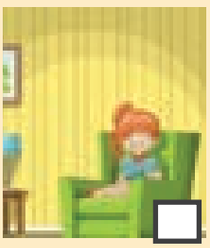

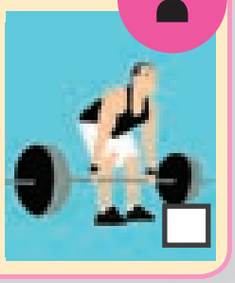

_____ _____ _____ _____

Tick (✓) the muscular force.
