A **Refrigerator (Fridge)** is a popular home appliance for preserving food. It works on the principle of cooling.

The fridge has a pump that transfers heat from the inside of the fridge to its outside. This helps it to keep things cold.

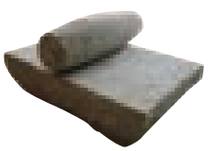

The cold temperature inside the fridge slows down the bacterial growth in food and thus preserves the food for a longer time.

Safety Measures in Kitchen

- Never play with kitchen utensils such as knives, match boxes and glasswares.
- Use a cloth to hold hot pans.
- Inform an adult in case you smell cooking gas leakage
- Turn off the gas stove, microwave oven and any other electrical gadget immediately after use.

Match Column A with Column B.
