What happens when you

add oil to water?	
add colour to the mix?	
add salt to the mix?	

First of all, the oil floats on the top of the water because it is lighter than the water. Since the salt is heavier than oil, it sinks down into the water and takes some oil with it, but when the salt dissolves, the oil goes up again. Is it not interesting?

4.4 Measuring Temperature of Water and Milk using Thermometer

W7OY0

- Have you seen this device?
- Where have you seen this?
- Do you know the use of thermometer?

Usually, our body temperature is lower in the morning; it increases during the day and is highest in the evening. Other than this, a rise in body temperature is usually caused by an infection. Using a thermometer to check our temperature can help us manage any illness.

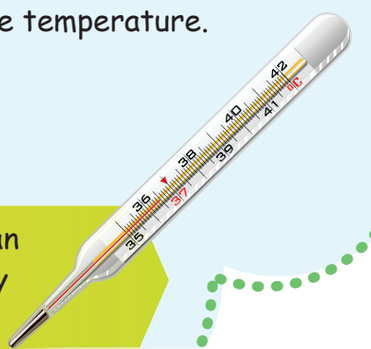

What is a thermometer?

Thermometer is an instrument used for measuring body temperature. It consists of a narrow, sealed glass tube, marked like a scale. The markings show the temperature.

Daniel Fahrenheit, a German physicist, invented mercury thermometer in 1714.
