Let us Do

Let us assemble a Simple Pump

Materials needed: Any hollow tube – PVC, metal or even a long papaya stem

Procedure:

Hold the tube with your left hand and move it up and down into a bucket of water. Keep the palm of your right hand on the top of the tube and open and close it with each up and down reciprocation. Soon, water will start squirting out. Here the up-down motion of the left hand does the pumping while the right palm acts like a valve.

More to know

Each person on the Earth requires at least 20 to 50 litres of clean and safe water per day for drinking and other activities.

III. Why should we save water?

Only 3% of the water in the entire Earth is freshwater. Water is precious. So, we should never waste water.

Some methods to prevent wastage of water:

- Never allow water to overflow from buckets.
- Wash fruits and vegetables in a bowl of water and not under running tap water.
- Always close the taps while brushing the teeth.
- Use left over water in your water bottle to water a potted plant.
- Turn off the tap after each use.
- Use a sprinkler to water the garden.
