- These trees are conical in shape. This shape allows snow to slide from the trees easily.
- Needle like leaves help them to survive in cold conditions like snow.
- These trees do not shed leaves.
- They have cones instead of flowers. These cones protect the seeds during harsh winter. E.g., Pine tree.

Pine tree

Plants in Plains

- Plants in plains need to adapt to both dry conditions and extreme temperatures.
- They grow in warmer climate and usually shed their leaves in winter to protect themselves from cold.
- They have flat and broad leaves.
- They have thick and woody stem. E.g., Mango, Banyan, Teak.

Mango

Banyan

Teak

Banyan, Peepal and Tamarind trees live more than hundred years.

Plants in Coastal Areas

- They are tall and mostly straight.
- The leaves are called frond.
- The frond look like feathers meant for protection from wind.
- These plants tolerant to saline (salt) water. E.g., Coconut tree.

Coconut tree
