Inhalation is the process of taking the air inside and exhalation is the process of releasing the air outside. This **cyclical process of inhalation and exhalation is called breathing.**

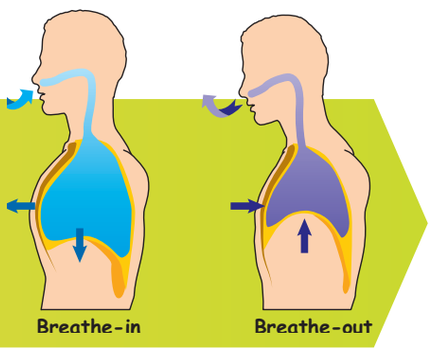

**We take oxygen and release carbon dioxide gas while breathing.**

**Think zone:** Why the doctor checks your pulse when you are sick and ask you to breathe in and breathe out?

**Do you know?**

When we breathe-in our chest raises up and when we breathe-out it lowers down.

## Let Us Do

Tick ( ✓ ) the one which breathes and cross ( X ) the one that does not breathe.

## Let Us Write

Choose and write the correct answer for the following actions.

| S.No | Actions | Inhalation / Exhalation |
|---|---|---|
| 1 | Air moves out of the lungs | |
| 2 | Air goes into the lungs | |
| 3 | Chest raises up | |
| 4 | Chest lowers down | |
