Try to Answer

The effect of exercise on breathing

Mathi and Mozhi practised various exercises like walking, skipping and running. They counted the number of times they breathed in one minute after each exercise and recorded their results in the bar diagram:

Look at the bar diagram.

a. Which activity raised the breathing rate the most? _____

b. Which activity do you think exercises the heart muscle the least? _____

c. Write 'T' if True and 'F' if False.

1. They breathed more number of times when they were walking. ( )
2. They breathed less number of times when they were sitting. ( )
3. They took 50 breaths per minute when they were running. ( )
4. The more vigorous (active) the exercise, the greater the number of breaths. ( )

IV. Moving Air

Let us Do: Take some sand in your hand and release the sand. It falls in the direction of the wind.

Moving air is called wind. It moves across the surface of the Earth. **Based on the speed of air, wind** can be classified as **breeze, storm and gale.**

Do You Know?

Speed of the wind is measured using an instrument called 'Anemometer'.
