www.tntextbooks.in

Father: Iron is used to make vehicles, engines, railway tracks, ships, buildings, furniture, paper clips, tools, bicycles and thousands of other items.

Natural resources that once consumed, cannot be replaced are called non-renewable resources.

Think

Coal, Petroleum and Natural Gas are called Fossil fuels.
Iron, Copper, Bauxite, Gold, Silver and others ae called Mineral resources.

LET US KNOW

Non-renewable resources can be divided into three types. They are:

- Metallic resources
- Non - metallic resources
- Fossil fuel resources
